Reasons For Allowance

3. The following is an examiner's statement of reasons for allowance: the closest prior art of Kim (US 5,787,210) provides for motion compensator 36 extracts a set of pixel data from the previous frame stored in the first frame memory 34 based on a motion vector. Which corresponds to each block of the current frame, from the VLD 22 and provides the set of extracted pixel data to the adder 32. The set of extracted pixel data from the motion compensator 36 and the set of pixel difference data from the IT 30 are then summed up at the adder 32 to thereby provide reconstructed image data of a given block of the current frame. See col.4 lines 20-30. Kim failed to teach or suggest for a storage unit to store a current frame/field including first pixel-data corresponding to at least one of candidate motion vectors as inputted, and a previous frame/field

including second pixel-data corresponding to the at least one of the candidate motion vectors; a pixel-data extraction unit to extract the first and the second pixel-data which respectively correspond to the at least one of candidate motion vectors, respectively, from the storage unit; and a compensation pixel calculation unit to calculate first and second compensation pixel-data, respectively, for motion compensation, by adaptively applying a predetermined first weight according to the first and the second pixel-data, wherein the calculated first and second compensation pixel-data are used for the motion compensation of a current block to be interpolated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
